

REMARKS

As noted above, the overseas attorneys for the inventors discovered certain errors in the latest Sequence Listing that was of record in this case after the submission of a technically correct Sequence Listing on May 27, 2008. This came to the undersigned's attention on July 9, 2008.

This 4th Corrected Sequence submitted herewith **does not affect the only amino acid sequence that was the subject of the allowed claims.**

Therefore, it is believed that the Office would not consider it necessary to conduct any additional sequence searching based on the corrected sequences (SEQ ID NO:1, 15 and 29). Further more, several additional "Miscellaneous features" that were initially present but later inadvertently deleted from SEQ ID NO:1-8; and certain "Miscellaneous features" that better characterize SEQ ID NO:33, 36 37 and 40, are included here.

No new matter is being added to the Sequence Listing with these amendments; it is fully supported by the earlier Sequence Listings and the specification as filed.

Applicants respectfully request that the Substitute Sequence Listing and Statement be entered into the record prior to issuance of a patent

Respectfully submitted,
BROWDY AND NEIMARK, P.L.L.C.
